

STAIRCASES

CONCEPT TO COMPLETION

We design and build staircases, spiral staircases, safety rails, balustrades and handrails for both commercial and residential clients. This also includes high profile public offices and buildings. Working in a variety of materials to our customer's specification, to an architect's designs or to our own engineer's specifications allows us to create strong, complex structures that are corrosion resistant and will not wear easily.

These materials often integrate wood and glass in their designs to create a modern, stylish look whilst the stainless steel elements can be polished, milled, brushed, electropolished or bead blasted to provide a perfect finish that will maintain its looks over time.
